

Building and Executing Instructions

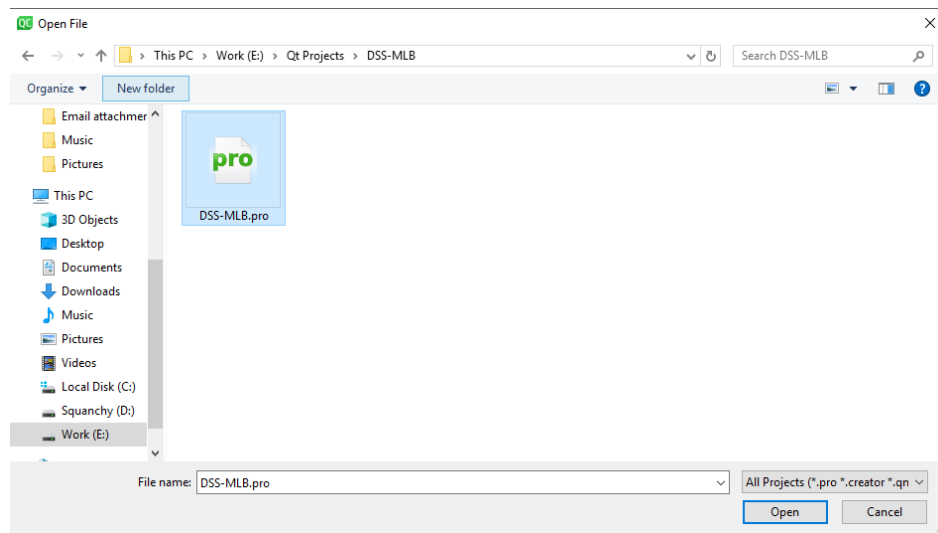

1. Download and install QtCreator and Qt 5.13.0 kits from <https://www.qt.io/download>. (Open source option).

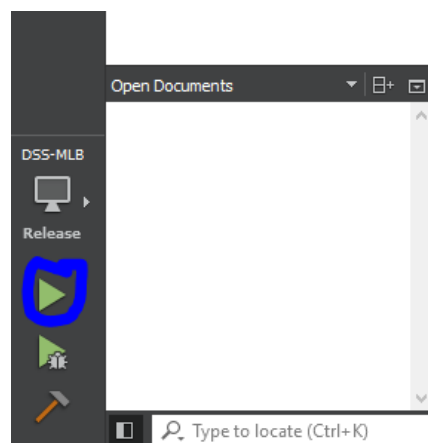

2. Once Qt is installed, open QtCreator 4.9.2 (Community edition).
3. Download or clone the project's source code from <https://github.com/dangbandy/DSS-MLB>.
4. In QtCreator, select Open Project and navigate to the DSS-MLB directory. Then select the DSS-MLB.pro file.

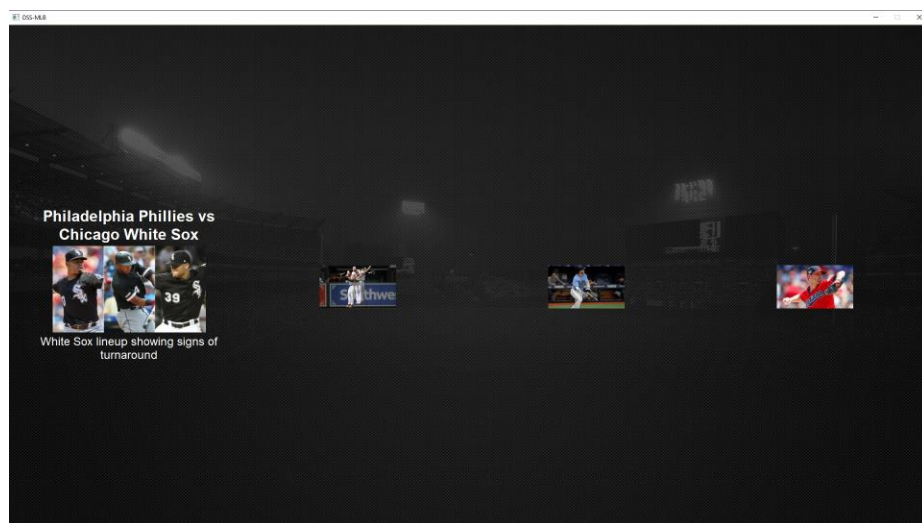

5. Select the Desktop Qt 5.13.0 MinGW 64-bit kit.
6. Ctrl+R or press the green triangle to build and run the project.

7. You should now see something like this.

8. Now that the program is running, use the left and right arrow keys to move from one game to the next. If the focused game is the first game, then the left arrow key will have no functionality. The same logic applies to the last game and the right arrow key.
